

## Pressostato per ambienti pericolosi

■ Euroswitch presenta il nuovo pressostato a piston con contatti in scambio Modello 48, certificato Atex, progettato per l'utilizzo in ambienti fortemente ossidanti in condizioni critiche. Tra le principali caratteristiche tecniche si segnalano: corpo d'acciaio zincato (inox a richiesta), peso 120 g, contatti elettrici d'argento; connettore DIN con grado di protezione IP67.

Euroswitch progetta e produce sensori di livello, pressostati e vuotostati, sensori di temperatura, termostati e sensori di rotazione. Basata a Sale Marasino, BS, è certificata ISO 9001:2008 e 14001:2004 e fa parte del Gruppo MONT.EL, un network di aziende che fanno "outsourcing evoluto" e sono in grado di fornire un prodotto completo, progettato in co-engineering o eseguito su disegno del cliente.

### **Polyester for food contact**

*Ensinger GmbH, represented in Italy by its branch in Busto Garolfo (MI), supplies high performance plastic materials (extruded and cast, semi-processed and finished pieces) destined for a wide range of applications and capable of resisting mechanical stress, aggressive chemicals and sterilization processes when needed.*

*The concern has recently unveiled Tecapet, a polyester featuring superior workability, no internal tension and high dimensional stability and wear resistance. Its bright white color makes it particularly suitable and appreciated in applications involving contact with food products. Also in the food area, the German concern proposes various families of plastics including Tecaform AH (characterized by a low friction coefficient, suitable for dynamic applications) and Tecapeek (able to operate at +250 °C, making it a valid alternative to stainless steel).*

### **Pressure switch for dangerous environments**

*Euroswitch presents the new Model 48 piston pressure switch with contacts in exchange, Atex certified, designed for use in high oxidation environments or under critical conditions.*

*Technical characteristics include: zinc-plated steel frame (stainless by request), weight 120 g, silver electric contacts; DIN connector with IP67 protection grade.*

*Euroswitch designs and manufactures level sensors, pressure switches and vacuum switches, temperature sensors, thermostats and rotation sensors.*

*Based in Sale Marasino, BS, the concern has ISO 9001:2008 and 14001:2004 certification, and is part of the MONT.EL group, a network of concerns practicing "advanced outsourcing" and capable of supplying a complete product, designed in co-engineering or following the customer's design.*
